Regulatory Capital Adequacy position (as per Basel II & Basel III norms as made applicable by RBI) is assessed periodically. Besides, the bank also assessed its own internal estimate of risk capital based on its Board approved ICAAP policy and Stress Testing Policy to cover the Pillar 2 risks. Risks are assumed in line with the Bank's risk bearing capacity and capability in order to generate yields, taking risk-return frontier into account. This aims to ensure that risks that could jeopardize the Bank's existence are avoided.

[#] The same transition approach will apply to deductions from Additional Tier 1 and Tier 2 capital.

Operations in all credit exposures of ₹ 50 lakh and above are monitored on a monthly basis by Credit Monitoring department to detect delinquency signals at an early date and nurse the account.

Rating migration studies are conducted at regular intervals.

Pricing of corporate exposures is subjected to RAROC analysis based on bank's Board approved Risk Adjusted Return On Capital (RAROC) policy.

Both regulatory capital and economic capital requirements are assessed at the time of credit appraisal of corporate exposures.

6. Credit Risk Mitigation: Disclosures for standardised approaches

Qualitative Disclosures

A Credit Risk Mitigation and Collateral Management Policy, addressing the Bank's approach towards the credit risk mitigants used for capital calculation is in place.

Following items are considered for on and off balance sheet netting:

- a) Deposits with specific lien to the facility
- b) Subsidies received (for priority sector advances)
- c) Claims received (for NPA accounts)

Of the eligible financial collaterals, the types of collateral taken by the bank are gold ornaments and bank's own deposit receipts. Gold ornaments are accepted as collateral by branches after due scrutiny and are marked to market value on a daily basis. Bank has made an assessment of market liquidity risk involved in liquidating gold ornaments and is considering a holding period of 21 days for advance against pledge of gold ornaments. In Pillar 1 capital adequacy computations, bank considers a haircut of 22% (after scaling up the standard supervisory haircut of 15% to a 21 day holding period). In addition to this, bank is maintaining extra capital for its gold loan portfolio in Pillar 2 capital computations.

The types of guarantees recognized for credit risk mitigation are guarantee by central government, state government, ECGC and banks (in the form of bills purchased/discounted under Letter of credit).

Collaterals other than financial collaterals that secure the credit portfolio of the bank are land & building, plant & machinery and current assets of the counter party. Land and Building includes commercial building, residential property and vacant land.

11. Counterparty Credit Risk

Counterparty Credit Risk (CCR) is the risk that the counterparty to a transaction could default before final settlement of the transaction's cash flows. An economic loss would occur if the transaction or portfolio of transactions with the counterparty has a positive economic value for the Bank at the time of default. Unlike exposure to credit risk through a loan, where the exposure to credit risk is unilateral and only the lending bank faces the risk of loss, CCR creates a bilateral risk of loss whereby the market value for many different types of transactions can be positive or negative to either counterparty. The market value is uncertain and can vary over time with the movement in underlying market factors.

Capital is maintained on the exposure to CCR as per regulatory guidelines on Capital adequacy computation. The exposure is calculated using Current Exposure Method. The MTM on client exposures are monitored periodically. The Bank does not recognize bilateral netting for capital computation.
